

Amendments to the Claims:

The following listing of claims will replace all prior versions, and listings, of claims in the application:

1-16. (Canceled)

17. (Currently Amended) An organic EL device, comprising:

a plurality of light-emitting areas above a substrate, each of the light-emitting areas having a light-emitting layer provided between a first electrode layer and a second electrode layer opposing thereto;

a plurality of non-light emitting area areas above a substrate, each of the non light-emitting areas having a non light-emitting layer provided between the plurality of light emitting areas; and

a hole blocking layer, which allows electrons but not holes to pass therethrough, over the light-emitting areas layers and non light-emitting area layers to enhance insulating properties between the plurality of light-emitting areas.

18. (Previously Presented) The organic EL device according to Claim 17, further comprising a layer composed of a material containing fluorine between the first electrode layer and the light-emitting layer.

19. (Previously Presented) The organic EL device according to Claim 17, wherein the first electrode layer is an anode and the second electrode layer is a cathode, further wherein the anode is provided with a hole injection/transport layer thereon, and the hole blocking layer comprises at least one of an alkali fluoride and an alkali earth fluoride.

20. (Currently Amended) An electronic apparatus having an organic EL device, the organic EL device comprising:

a plurality of light-emitting areas above a substrate, each of the light-emitting areas having a light-emitting layer provided between a first electrode layer and a second electrode layer opposing thereto;

a plurality of non light-emitting layer areas above the substrate, each of the non light-emitting areas having a non light-emitting layer provided between the plurality of light-emitting areas; and

~~over the light-emitting areas and a non light-emitting area to enhance insulating properties between the plurality of light-emitting areas,~~ a hole injection/transport layer and a hole blocking layer, which allows electrons but not holes to pass ~~therethrough.~~
therethrough, in both of the light-emitting areas and the non light-emitting areas.

21. (New) The electronic apparatus having an organic EL device of Claim 20, wherein the first electrode is an anode and the second electrode is a cathode.

22. (New) The electronic apparatus having an organic EL device of Claim 21, wherein, the hole injection/transport layer is formed between the first electrode and the light-emitting layer.

23. (New) The electronic apparatus having an organic EL device of Claim 20, wherein the hole blocking layer is formed over the light-emitting layer.

24. (New) The electronic apparatus having an organic EL device of Claim 20, wherein the hole blocking layer is formed between the cathode and the light-emitting layer.

25. (New) The electronic apparatus having an organic EL device of Claim 17, wherein the first electrode is an anode and the second electrode is a cathode.

26. (New) The electronic apparatus having an organic EL device of Claim 17, wherein the hole blocking layer is formed over the light-emitting layer.

27. (New) The electronic apparatus having an organic EL device of Claim 17, wherein the hole blocking layer is formed between the cathode and the light-emitting layer.
